

EXPERIMENT-3

Name: Karthi D

Rollno: 240701230

COMMAND-LINE-INTERFACE:

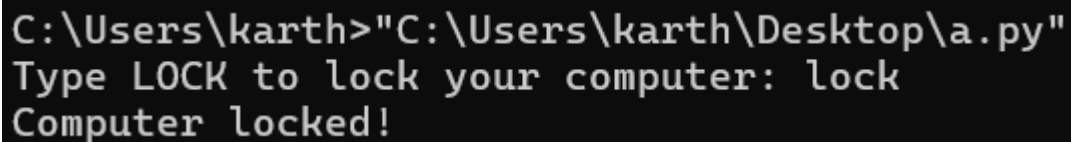

CODE:

```
import ctypes

command = input("Type LOCK to lock your computer: ")

if command.strip().upper() == "LOCK":
    ctypes.windll.user32.LockWorkStation()
    print("Computer locked!")
else:
    print("Invalid command. Nothing happened.")
```

OUTPUT:

```
C:\Users\karth>"C:\Users\karth\Desktop\a.py"
Type LOCK to lock your computer: lock
Computer locked!
```

GRAPICAL-USER-INTERFACE:

CODE:

```
import tkinter as tk
import ctypes

def lock_computer():
    ctypes.windll.user32.LockWorkStation()

root = tk.Tk()
```

```
root.title("Windows Actions")
```

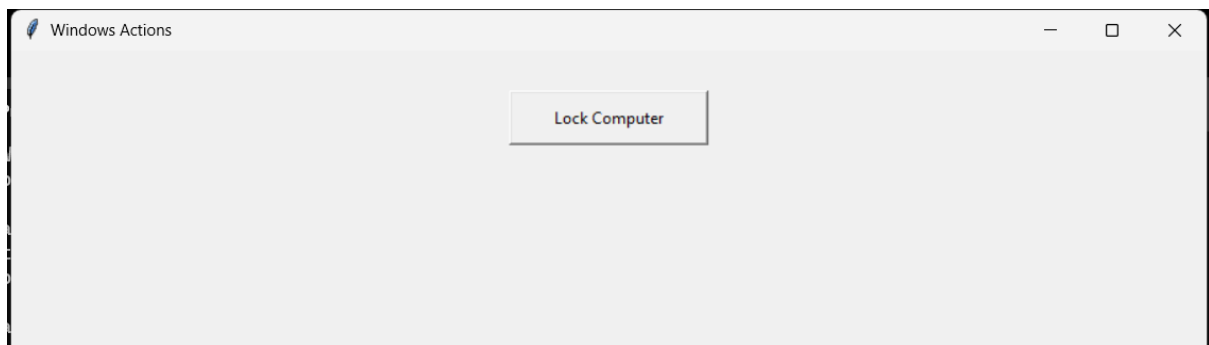

```
root.geometry("900x900")
```

```
lock_button = tk.Button(root, text="Lock Computer", command=lock_computer, height=2, width=20)
```

```
lock_button.pack(pady=30)
```

```
root.mainloop()
```

OUTPUT:

VOICE-USER-INTERFACE

CODE:

```
import speech_recognition as sr
```

```
import pyttsx3
```

```
engine = pyttsx3.init()
```

```
r = sr.Recognizer()
```

```
def speak(msg):
```

```
    engine.say(msg)
```

```
    engine.runAndWait()
```

```
def listen():
```

```
    with sr.Microphone() as source:
```

```
        return r.recognize_google(r.listen(source))
```

```
speak("What is your name")
```

```
try:
```

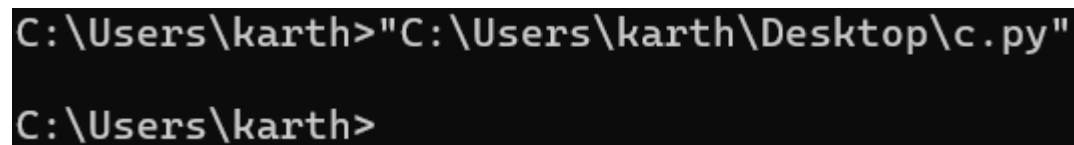

```
    name = listen()
```

```
    speak("Hello " + name)
```

```
except:
```

```
    speak("Could not recognize your name")
```

OUTPUT:

A terminal window with a black background and white text. The first line shows the command 'C:\Users\karth>"C:\Users\karth\Desktop\c.py"' being entered. The second line shows the prompt 'C:\Users\karth>' after the command has been executed.

```
C:\Users\karth>"C:\Users\karth\Desktop\c.py"  
C:\Users\karth>
```

USER-SATISFACTION-COMPARISION

CODE:

```
cli = int(input("Enter CLI satisfaction score (1-10): "))
```

```
gui = int(input("Enter GUI satisfaction score (1-10): "))
```

```
vui = int(input("Enter VUI satisfaction score (1-10): "))
```

```
print("CLI Score:", cli)
```

```
print("GUI Score:", gui)
```

```
print("VUI Score:", vui)
```

```
if cli > gui and cli > vui:
```

```
    print("CLI has highest user satisfaction")
```

```
elif gui > cli and gui > vui:
```

```
    print("GUI has highest user satisfaction")
```

```
elif vui > cli and vui > gui:
```

```
    print("VUI has highest user satisfaction")
```

```
else:
```

```
    print("Two or more interfaces have equal satisfaction")
```

OUTPUT:

```
Command Prompt
Microsoft Windows [Version 10.0.26200.7623]
(c) Microsoft Corporation. All rights reserved.

C:\Users\karth>"C:\Users\karth\Desktop\d.py"
Enter CLI satisfaction score (1-10): 5
Enter GUI satisfaction score (1-10): 4
Enter VUI satisfaction score (1-10): 3
CLI Score: 5
GUI Score: 4
VUI Score: 3
CLI has highest user satisfaction
