

EXPERIMENT-7

Name: Karthi D

Rollno:240701230

In this experiment, a Food Delivery Application interface is designed in two ways: one representing a good design and the other representing a bad design using Balsamiq.

APPLICATION OVERVIEW

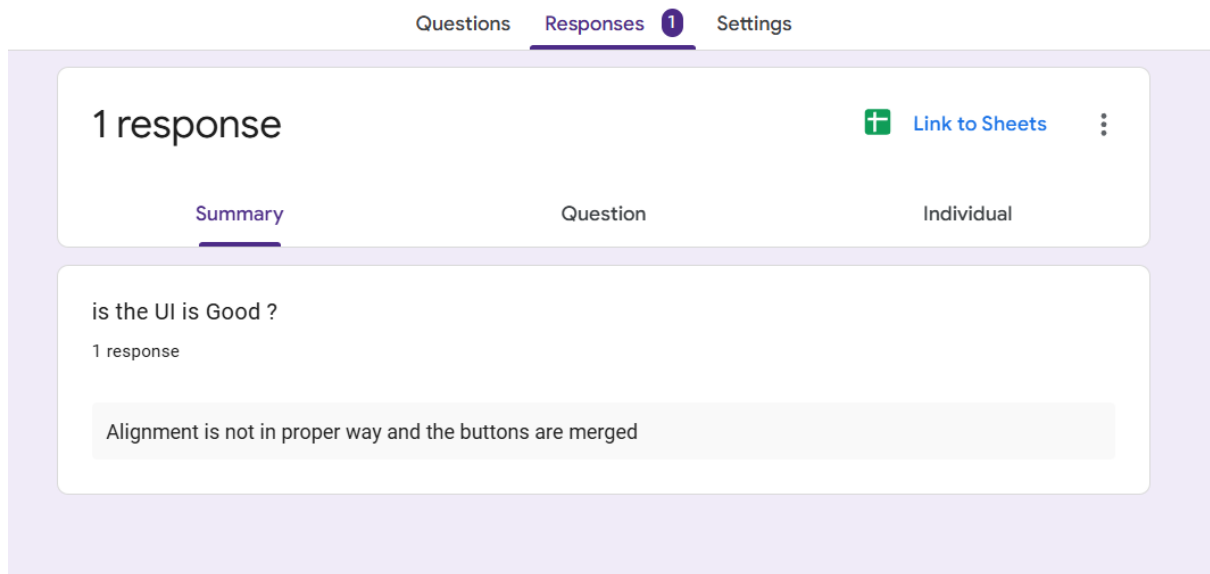

The Food Delivery App allows users to search for food items, view available dishes, and place orders. The design comparison highlights the importance of proper alignment, spacing, and consistency.

BAD DESIGN SCREEN

The bad design violates UI principles and creates a confusing interface.

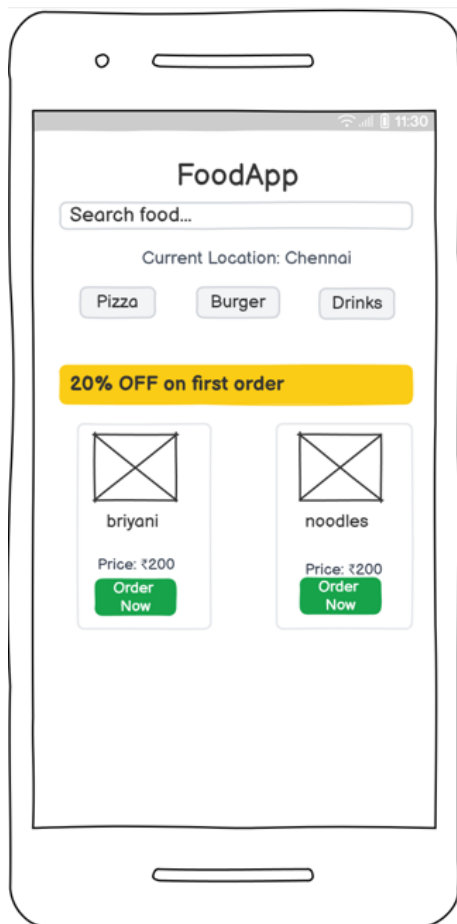

FEED BACK :

Issues:

- Misaligned elements
- Poor placement of search bar and title
- Uneven spacing between components
- Inconsistent button sizes and styles
- Overlapping and cluttered layout
- Categories not properly spaced
- Difficult to read and navigate

GOOD DESIGN SCREEN:

Features:

- Proper alignment of all elements
- Centered title and search bar
- Clearly visible location information
- Food items arranged in a structured layout
- Equal spacing between elements
- Consistent button size and color
- Easy-to-read text and organized categories
