

EXPERIMENT-8

Name: Karthi D

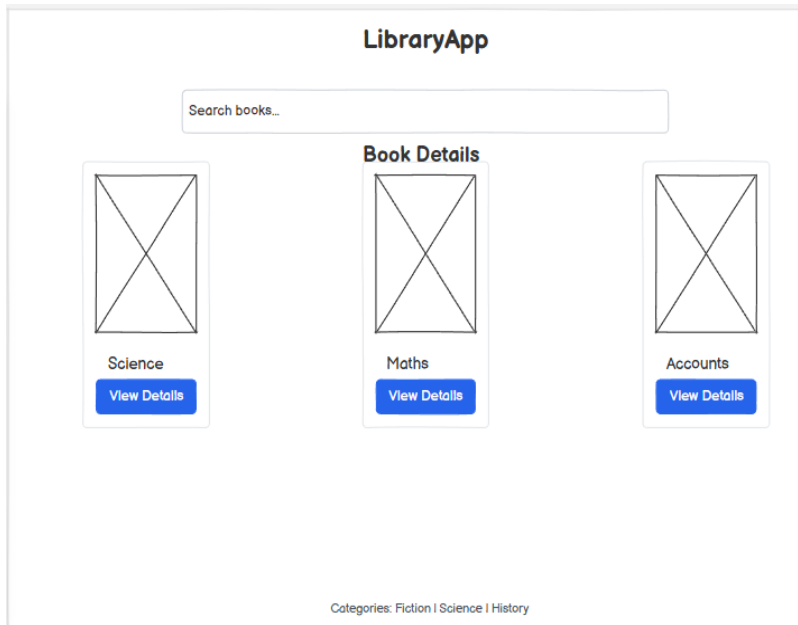

Rollno:240701230

To create a storyboard representing the user flow of an application using Balsamiq by designing a low-fidelity prototype.

The Library App is designed to help users search for books, view book details, borrow books, and manage borrowed books. The storyboard represents the complete flow of actions performed by the user.

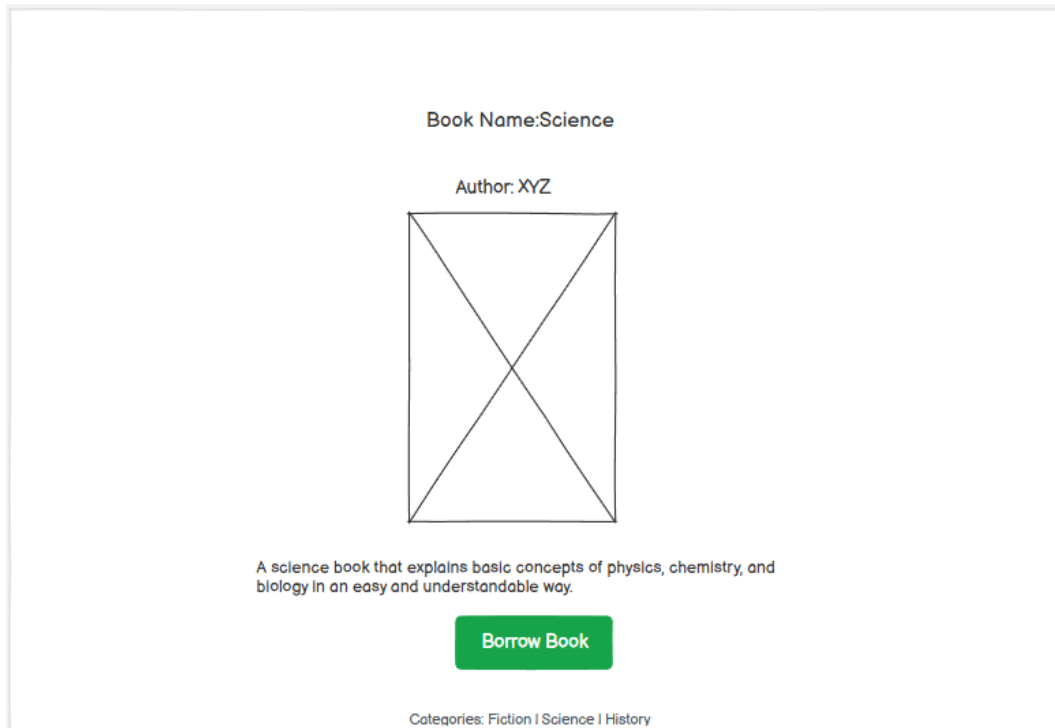

1. Home Screen

- Displays the application title (LibraryApp)
- Contains a search bar to find books
- Shows available books with images
- Each book has a "View Details" button
- Categories of books are displayed at the bottom

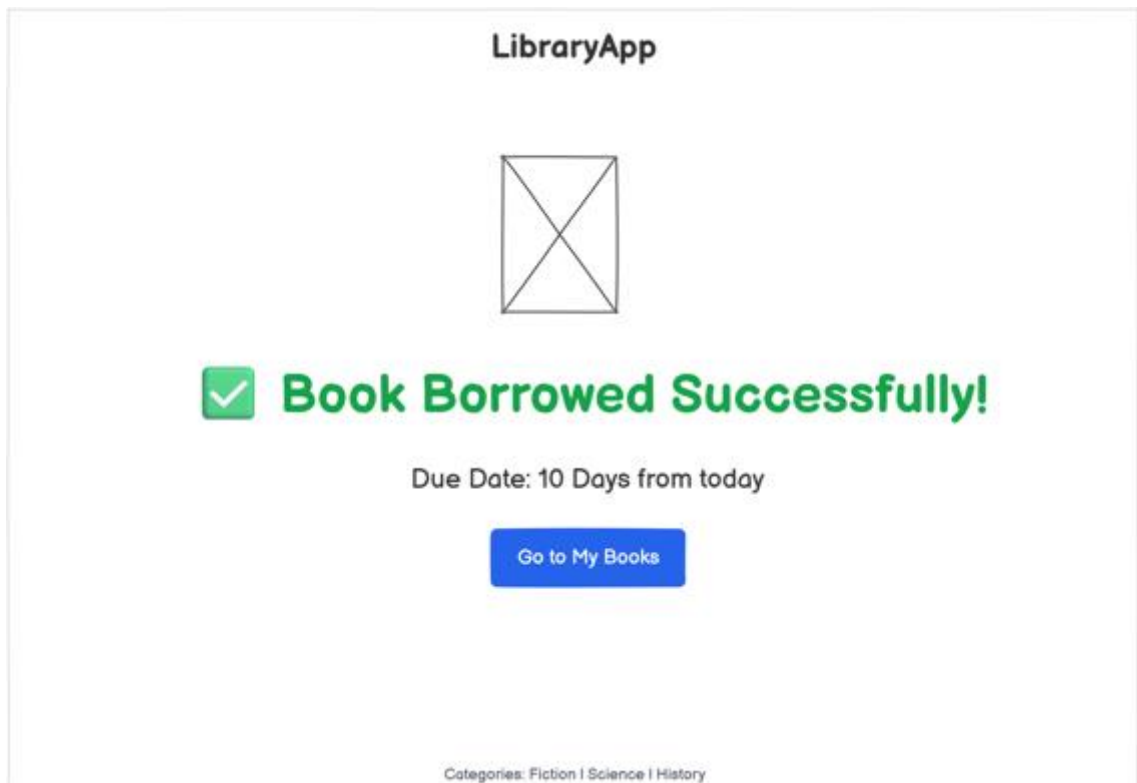

2. Book Details Screen

- Displays detailed information about the selected book
- Shows book name and author
- Includes a short description of the book
- Contains a "Borrow Book" button for user action

3. Borrow Confirmation Screen

- Displays a success message after borrowing a book
- Shows the due date for returning the book
- Includes a button to navigate to "My Books"

4. My Books Screen

- Displays the list of borrowed books
- Shows due dates for each book
- Provides a "Return Book" option for each item

LibraryApp

My Books

Book 1 - Due: 10 Apr		Return Book
Book 2 - Due: 15 Apr		Return Book
